EDUCATION

- VIT Bhopal University** Bhopal, Madhya Pradesh
B.Tech in Computer Science, Cloud Computing & Automation; CGPA: 8.37/10 Sep 2023 – Present
- Agra Public School** Agra, Uttar Pradesh
Senior Secondary, CBSE; GPA: 8.3/10 May 2022
- St. George's College** Agra, Uttar Pradesh
Secondary Education, ICSE; GPA: 8.1/10 June 2020

EXPERIENCE

- Cloudera** Bengaluru, Karnataka
Software Engineering Intern March 2026 – June 2026
 - Retrieval-Augmented Generation System:** Built a RAG-based AI assistant enabling semantic search and natural language querying over large-scale document collections.
 - Vector Search Pipeline:** Designed a retrieval pipeline using vector embeddings and similarity search to surface relevant content from unstructured text data.
 - LLM-Based Answer Generation:** Integrated a large language model with prompt engineering techniques to generate accurate, context-grounded responses and minimize hallucinations.
- Rumango** Bengaluru, Karnataka
UI Development Intern May 2025 – June 2025
 - MEAN Stack Development:** Developed user interfaces using the MEAN stack, focusing on responsiveness and performance.
 - UI Optimization:** Enhanced UI components by improving loading times and visual consistency across screens.
- InstructIQ** Remote
Data Science Intern Feb 2025 – Mar 2025
 - ML Model Development:** Built ML models for summarization, sentiment analysis, and recommendation systems.
 - NLP for Education:** Applied NLP techniques to structure and interpret educational content.

PROJECTS

- MedSenseAI: Safety-First Medical Report Explainer – LangChain, RAG, Pydantic, Docker, Python:** Built an AI system converting medical reports (CBC, LFT, KFT, thyroid, lipid, diabetes) into patient-friendly explanations using RAG over trusted medical sources, a rule-based risk triage engine, safety guardrails, and Hindi/English doctor-question generation. Containerized with Docker Compose and built a production deployment stack.
- LearnX: AI Debate Practice Platform – Angular, TypeScript, Web Speech API, Tailwind CSS:** Built an AI-powered debate practice app with topic selection, timed sessions, and speech recognition. Implemented feedback on clarity, structure, and persuasiveness to improve communication skills, with a responsive UI using modular Angular components.
- Microcalcification Detection in Coronary CT using Deep Learning – CNN, ResNet-50, U-Net, Python:** Built deep learning models for detecting coronary microcalcification in CT scans as part of an EPICS research project; authored a two-column IEEE-style journal paper with figures generated from Jupyter notebooks.

SKILLS

- Languages:** C++/C, Python, SQL, JavaScript
- Frameworks:** FastAPI, Angular, React.js, Django, LangChain
- ML/AI:** Transformers, LLMs, RAG Pipelines, Vector Search, Prompt Engineering, Fine-tuning, CNNs, RNNs, Scikit-learn, Pandas, NumPy
- Tools & Platforms:** Git, AWS, OracleCloud, MongoDB, MySQL, Postman, MATLAB
- Relevant Coursework:** Data Structures & Algorithms, OOPS, Operating Systems, Data Science, Machine Learning, DBMS, Computer Networks

ACHIEVEMENTS & CERTIFICATIONS

- Certified Oracle Cloud Infrastructure Developer Professional
- Certified AWS Cloud Practitioner Essentials
- Content Writer & Core Team Member, VIT Bhopal E-Cell Club – led content strategy for social media & event promotions; received LOR
- Selected as Contributor – GirlScript Summer of Code (GSSoC)
- NPTEL Certification – Introduction to Cloud Services, scored above 80%
- NPTEL Certification – Parallel and Distributed Algorithms, scored above 80%
